

User Flow Diagram Evidence

API client: **sabotage-minecraft**

Repository: <https://github.com/hakonikomoru/sabotage-minecraft>

Prepared: 2026-06-04

This user flow shows the reviewer how the API client is operated and how live chat commands become in-game effects.

Typical Review Scenario

- Operator starts the Bridge Server and Minecraft Bedrock Dedicated Server.
- Operator starts a YouTube Live stream and sets YOUTUBE_LIVE_VIDEO_ID.
- Operator runs /scriptevent sab:command start in Minecraft.
- A viewer sends !block or !hole in YouTube Live Chat.
- Bridge queues the command and Minecraft executes the corresponding effect.
